- SIP inflows hit a lifetime high of INR 31,002 Cr (\$3.4 Bn) in Dec'25; Retail turned to buyers after four months – with inflows of \$0.2 Bn (Dec'25: Outflows of \$1.3 Bn)
- Oil prices climbed by more than 16% in Jan'26, given the risks to global oil flows associated with Venezuela and Iran, and OPEC+ production pause announced
- The INR depreciated by 2.3% over the month and ended the month at 91.99/USD, with a one-year depreciation now at 5.8%
- India's FX reserves came in at \$709 Bn on 23rd January, indicating that the RBI bought back \$12.8 Bn of forex reserves in the four weeks prior
- President Trump announced on 13th January a 25% tariff on any country doing business with Iran; This may intensify the challenges faced by Indian exporters, even though India's overall external trade is likely to remain broadly stable
- India-EU announced an FTA which marks a notable addition to New Delhi's recent run of trade agreements
- Dec'25 CPI printed at 1.3% YoY (Consensus: 1.6%), up from 0.7% in Nov'25; Dec'25 IIP rose by 7.8%, reaching its highest level in over 2 years, after registering high growth of 7.2% (RE) in Nov'25
- India's finance ministry plans to scrap the five-year-old restrictions on Chinese firms bidding for government contracts

Though the macro-economic trends remaining strong, the Indian market have remained caught in larger geopolitical tailwinds and is yet to retrace its way. MSCI India (\$ index) fell by 4.8% in Jan'26, grossly underperforming MSCI APJ/EM indices by 12.8%/13.6%, respectively. Large caps fell by 4.8%, outperforming Small and Mid caps by 1.9%/1.7%, respectively. Materials (+0.3%) was the only sector with a positive gain, while Real Estate (-12.7%), Energy (-9.2%), Consumer Discretionary (-8.8%), Consumer Staples (-5.6%), Health Care (-6.4%) and Communication Services (-7.1%) fell by more than -5%. The underperformance was due to mixed corporate earnings so far for 3QFY26, Iran tariff threat, persistent FII selling, INR weakness and oil price spike.

While domestic macro conditions remain robust, global sentiment due to the no-deal with the US so far is weighing on the currency and the markets (amidst mixed earnings and a relatively high valuation). However, with supportive fiscal and monetary policies, recovering domestic demand and broad-based sectoral growth, corporate earnings are set to rebound. We forecast MSCI India earnings to grow by 13%/14% in CY26/CY27 respectively. Valuations remain at a premium, but the gap with EM has compressed to below the long-term average. Looking forward, a resolution in US-India trade relations could trigger a re-rating in the near term. We reiterate our preference for domestic over exporters.

## Primary Risk Disclosures:

Investment in shares of the Fund involves investment risks such as trading volumes, settlement risk, liquidity risk, default risk including the possible loss of principal and there is no assurance or guarantee that the objectives of the Fund will be achieved.

As the price / value / interest rates of the securities as well as the currency in which the Fund invests fluctuates, the value of your investment in the Fund may go up or down depending on the various factors and forces affecting capital markets and money markets in India.

Past performance of the Promoter / Investment Manager does not guarantee future performance of the Fund and may not necessarily provide a basis of comparison with other investments.

The name of the Fund does not, in any manner, indicate either the quality of the Fund or its future prospects or returns.

The Fund is not a guaranteed or assured return fund. The Fund does not pursue an environmental, social or sustainability objective. Any reference to the firm's membership of external initiatives (including PRI) relates solely to the asset-management company and should not be interpreted as evidence that this Fund has specific ESG characteristics or delivers environmental or social outcomes.

Indian equity and Equity Related Instruments by nature are volatile and prone to price fluctuations on a daily basis due to both macro and micro factors.

The use of derivatives by the Fund affects the volatility of the Fund and introduces leverage, which can magnify both potential gains and losses; Consequently, investors may experience greater returns than the underlying assets might otherwise deliver or may lose a significant portion, or all, of their investment.

The Morningstar Rating TM for funds, or "star rating," is calculated for managed products (including mutual funds, variable annuity and variable life subaccounts, exchange-traded funds, closed-end funds, and separate accounts) with at least a three-year history. Exchange-traded funds and open-ended mutual funds are considered a single population for comparative purposes. The top 10% of products in each product category receive 5 stars, the next 22.5% receive 4 stars, the next 35% receive 3 stars, the next 22.5% receive 2 stars, and the bottom 10% receive 1 star. The Overall Morningstar Rating for a managed product is derived from a weighted average of the performance figures associated with its three-, five-, and 10-year (if applicable) Morningstar Rating metrics. The weights are: 100% three-year rating for 36-59 months of total returns, 60% five-year rating/40% three-year rating for 60-119 months of total returns, and 50% 10-year rating/30% five-year rating/20% three-year rating for 120 or more months of total returns. While the 10-year overall star rating formula seems to give the most weight to the 10-year period, the most recent three-year period has the greatest impact because it is included in all three rating periods.
