Market Outlook - March 2022

Indian equities had a turbulent start to the year as markets witnessed global sell-off due to surface of unprecedented events. Faster-than-expected rate hikes signals by the US Fed, rising bond yields, crude prices and geopolitical tensions continued to weigh on investor sentiments. Concerns that rising geopolitical tension could spark global supply chain disruption resulting in rising input costs. Meanwhile Concerns around the third COVID-19 wave were muted as cases showed a steep rise while hospitalizations remained low. During the quarter the Indian central bank (Reserve Bank of India) maintained its accommodative stance, keeping rates on hold. Month of March, however, saw recovery, as geopolitical tensions and oil prices cooled down a bit.

FII continued as to remain net sellers of Indian equities in March (-\$4.8bn, following -\$5.0bn in February). This marked the sixth consecutive month of net equity outflows for FIIs. DIIs recorded inflows of \$5.2bn in March, maintaining the buying trend observed since March 2021. Mutual funds and Insurance funds were both net buyers in March with \$3.1bn inflows and \$2.1bn inflows respectively.

The higher inflation and slower global growth arising from escalation of war is negative for risk assets in the short term. However, past episodes reflect that such crises had little discernible impact on a medium-term basis. Given the unpredictability of the geopolitical conflict(s), duration

and impact on economic growth, we will see some downside risk to India's growth forecast for FY23. Over next three years, India is likely to go back to its real GDP growth trend of 6.5% with all three drivers of economy namely Consumption, Investments and Exports firing.

In the near-term, higher commodity prices may lead to lower consumer discretionary demand and lower corporate margins, resulting in a downgrade in earnings for FY23. However, we believe over the next 3 years, earnings are likely to grow at a 13-15% CAGR, which is higher than the long-term average.

2022 is a year of transition, as excess liquidity gets withdrawn and interest rates inch up. Hence, valuation multiples can be expected to normalize. On an overall basis, this can be a year of moderate returns.

Valuations have corrected but remain close to long-term average. The heightened geopolitical conflict has also led to elevated FII outflows from India. But the same has been offset by strong DII buying during the same period which is supporting markets. On a medium-to-long term basis, we continue to remain positive on Indian equities and expect markets to continue to scale higher. Our long-term narrative for India remains intact. Overall, we believe Indian equity markets can give returns slightly below earnings CAGR over next 3 years.

Primary Risk Disclosures:

- Investment in shares of the Fund involves investment risks such as trading volumes, settlement risk, liquidity risk, default risk including the possible loss of principal and there is no assurance or guarantee that the objectives of the Fund will be achieved.
- As the price / value / interest rates of the securities as well as the currency in which the Fund invests fluctuates, the value of your investment in the Fund may go up or down depending on the various factors and forces affecting capital markets and money markets in India.
- Past performance of the Promoter / Investment Manager does not guarantee future performance of the Fund and may not necessarily provide a basis of comparison with other investments.
- The name of the Fund does not, in any manner, indicate either the quality of the Fund or its future prospects or returns.
- The Fund is not a guaranteed or assured return fund.
- Indian equity and Equity Related Instruments by nature are volatile and prone to price fluctuations on a daily basis due to both macro and micro factors.
- The use of derivatives by the Fund affects the volatility of the Fund and exposes it to the risk of loss due to the unexpected application of a law or regulation or because contracts are not legally enforceable or documented correctly.

The Morningstar Rating™ for funds, or "star rating," is calculated for managed products (including mutual funds, variable annuity and variable life subaccounts, exchange-traded funds, closed-end funds, and separate accounts) with at least a three-year history. Exchange-traded funds and open-ended mutual funds are considered a single population for comparative purposes. The top 10% of products in each product category receive 5 stars, the next 22.5% receive 4 stars, the next 35% receive 3 stars, the next 22.5% receive 2 stars, and the bottom 10% receive 1 star. The Overall Morningstar Rating for a managed product is derived from a weighted average of the performance figures associated with its three-, five-, and 10-year (if applicable) Morningstar Rating metrics. The weights are: 100% three-year rating for 36-59 months of total returns, 60% five-year rating/40% three-year rating for 60-119 months of total returns, and 50% 10-year rating/30% five-year rating/20% three-year rating for 120 or more months of total returns. While the 10-year overall star rating formula seems to give the most weight to the 10-year period, the most recent three-year period has the greatest impact because it is included in all three rating periods.

Lipper Leaders for Total Return may be the best fit for investors who want the best historical return, without looking at risk. This measure alone may not be suitable for investors who want to avoid downside risk. For more risk-averse investors, Total Return ratings can be used with Preservation and/or Consistent Return ratings to make an appropriate selection that balances the risk and return. The funds in each index receive scores for each metric in each time period. The bottom 20% of funds receive a "1." The second quintile receives a "2," the third a "3," the fourth a "4." Meanwhile, the fifth quintile receives a "5." The top 20% of funds, those ranked "5," earn the "Lipper Leaders" designation.
